Bitzer csh screw compressor service manual

The new CSH series is based on proven design elements of innovative BITZER compact screws, which are recognized as a benchmark worldwide. They were designed to take into account the universal application of air-cooled liquid coolers and heat pumps. In addition to known properties, compressors are characterized by further energy efficiency improvement under full and partial load conditions. In addition, the application limits were greatly extended both due to the low saturation outlet temperature and the high pressure ratio (heat pumps) without compromising the reliability of operation. Internal volume ratio adjustment (in full and partial load) based on an expanded range of application Reduction of internal flow losses Optimisation of the oil management system Additional cooling under extreme operating conditions, using advanced direct liquid injection or external oil cooling at the actively controlled oil circulation level Compress associated accessoriesMore engines for different power supply voltagesSort of discharge and discharge inserts And closing valvesAdapter and closing valve economiser connectorSE-11 motor protection device for advanced compressor protection, monitoring and data recording system accessoriesCoon oil separators for use with flooded/falling film evaporators Vertical secondary oil separators: OAF seriesFluently internal receiversHorizontal liquid receivers: F seriesValued liquid receivers: FS seriesOil cooler OL series (cooled air) / - OW series (water cooled) Compressor accessoriesMore engines for different power supplymax suction and discharge inserts and closing valvesAdapter and closure valve economiser connectorSE-11 motor protection device for advanced compresses protection of the , monitoring and data recording systems related accessoriesSecondary oil separators for use with flooded/falling film evaporators Vertical secondary oil separators: OAF seriesLiquid receiversHorizontal liquid receivers: F seriesWorthing receivers: FS seriesOil cooler:OL series (cooled with air) / - OW series (cooled with water) 1. Product description. JZB series features according to their semi-hermetic bitzer compressor, it contains a range of 4 series cooled and water-cooled, medium to high, medium and low temperature. The main components of compressor , oil heating , vibration eliminator, oil separator , capacitor , receiver , filter , visual glasses , solenoid valve , H/L P meter , mechanical P controller , oil protection, gas separator , suction filter , cylinder fan The above components may differ in cooled air and water cooled products. How about your company Produce Line 9 refrigeration full equipment?5. Can you produce according to the samples?9 A: Yes, we can produce according to your samples or technical drawings. Q6. What is your example policy?9 A: We can provide a sample if we have ready parts in stock. Q7. Do you try all your goods before delivery?9 A: Yes, before delivery we have a 100% test.
